

How Safe is Your Rail Maintenance Equipment?

Your Rail Maintenance Equipment serves a vital role in maintaining the operational efficiency of your rail cars and locomotives. The availability of these cars to haul goods is crucial in running a profitable operation.

Whiting Corporation understands that safety is a critical factor in selecting your equipment. We use only the best materials and components available in our designs to provide a safe, reliable and durable system to meet any need in the rail maintenance equipment industry.

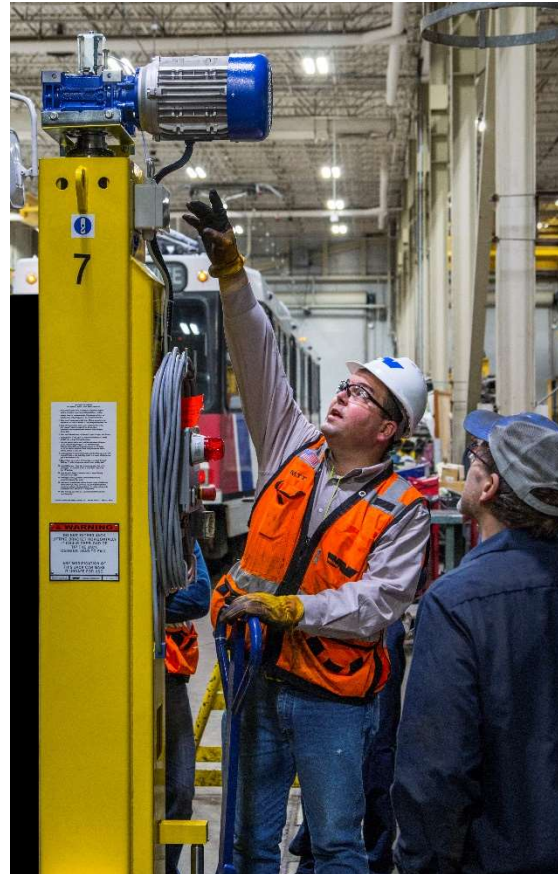

While performing the work needed on rail cars and locomotives, the safety of your personnel matters even more. The operations performed are typically executed with the car above the worker. Keeping the load suspended in the air is the purpose for your jack, lift table, etc. Knowing your equipment is in good working condition, per the original design's intent, provides your workers with the peace of mind they need to do their job safely.

By properly maintaining your Rail Maintenance Equipment you can have confidence that your equipment is going to be safe, reliable and durable for many years. Regular maintenance is not only recommended, but also crucial to the longevity of your equipment. This includes

- Conducting inspections to identify potential issues that may lead to problems down the road
- The use of proper lubricants
- Performing regular oil changes
- Making minor repairs if they arise

Doing these steps and procedures will ensure your equipment will last for many years of service.

In-house maintenance staff may not always have the expertise to perform a thorough inspection. Whiting Services (WSI) can provide these maintenance services and troubleshoot any issues if they arise. Our team of technicians is highly experienced and skilled in providing top-notch railcar maintenance services. They undergo rigorous training to stay current with the latest industry standards and best practices. WSI technicians utilize our industry-leading Rail Health Inspection

Program (RHIP) to provide a thorough assessment of your lifting equipment. Their expertise combined with access to the original product designs and drawings ensures that your equipment receives the highest level of care and attention. Contact your local WSI representative today to learn more about all that the RHIP includes and to expand the life of your rail maintenance equipment by making sure that it is safe and well maintained.
